

Why DI Squared?

Services Overview

Implement an efficient data strategy and infrastructure that unearth actionable insights from a mountain of data.

Spend to save
(and save on spend!)

DI Squared empowers you to extract the full value of your data through a cost-conscious, your-size-fits-you approach to data engineering, analytics, operations, and AI/ML.

DI Squared

Data insights, exponentially.

Services Overview

Our Practice →

Our six-factor “datascape” brings more x-factor to your data. We accelerate your journey to success with a mix of technologies and services tailored to *your* requirements.

Our global teams’ wide expertise across technologies and industries speeds up delivery while offering clients 24/7 active flexibility.

“If there is ever something I cannot figure out, with DI, I have a huge team of people behind me. DI Squared has been the most responsive consulting firm that I have ever worked with.”

Chad Miller
VP of Finance, Hood Industries

How We Help

- 1 Migration** 
Moving your data and applications to the cloud is a fast-track to advanced features and opens doors to cost savings when done well.
- 2 Data Engineering** 
Integrate disparate data sources and develop efficient and robust architectures to boost operational effectiveness.
- 3 Analytics** 
Thoughtful and creative designs focused on delivering critical insights, so you can operate more strategically and tactically.
- 4 Predictive & Cognitive Computing Solutions** 
Bring together NLP, probabilistic reasoning, and AI/ML to find real-time answers hidden in massive amounts of data.
- 5 Managed Services** 
From short-term projects to long-term managed services, we offer you our expert comprehensive support, 24/7.
- 6 Delivery Modernization** 
Save 10 days per development cycle through Agile methodology with embedded staff, coaching, and assessment.

Whether you have 12,000,000,000 rows of data to migrate or you need to resize literally 10,000 apps for cloud, we're your A team.

Our Practice Migration

Most organizations are not born-in-the-cloud tech companies. Adopting hybrid multicloud models and offloading retired platforms or costly providers is a necessary, but challenging, step.

When systems become fragmented and visibility is limited, complexity increases for everybody, ratcheting up costs.

To get you in the best position possible, we partner with you as you take the leap.

Our clients often take advantage of our migration accelerators. If those tools don't quite fit, we build a custom approach within your time/cost constraints.

Our Services

- Cloud readiness assessment
- Hybrid cloud migration
- Refactoring & right-sizing
- Cloud landing zone
- Cloud optimization
- Infrastructure implementation
- More

How We Help

1 Know your state

We work with you to streamline data and application migration through thoughtful preparation and planning that ties your workloads to measurable value.

2 Design

We craft a tailored migration strategy that suits your requirements, whether it's a big bang, phased, or parallel approach.

3 Prepare and Execute

We've helped hundreds of companies, big and small, to migrate to mature platforms anyone can use. We know how to pivot when faced with even the most challenging obstacles.

4 Validate and Support

We rigorously validate your migrated data and conduct comprehensive system testing. We monitor performance, optimize processes, and address post-migration challenges.

"I have worked closely with DI Squared on all aspects of our data strategy including MDM migration, EDW design and delivery, and Qlik BI development and feel confident I can count on their team to deliver on business-critical solutions."

– James Newsom, Jacuzzi

80% of unstructured data is untapped. We help you create value and velocity from data with thoughtful, creative architecture.

Our Practice Data Engineering

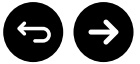

Modern infrastructure is key to elements like security and cost efficiency, but many organizations struggle with either getting started, course-correcting past work, or even gaining support for their initiative.

We create a strong framework for evolution. By using a range of engineering best practices and cloud-native technologies, our process enables teams to better manage resources and increase precision. Now *and* later on.

Unified data platforms and self-service tools shorten onboarding from months to days, and speed project delivery from weeks to hours.

Our Services

- Business value modeling
- Vendor selection
- Multi-source data integration
- Master data management
- ETL pipelines
- More

How We Help

1 Innovate faster with accurate analytics.

Develop a mature data platform anyone can use without technical skills or intermediaries – so you can iterate faster with the right governance and auditability in place.

2 Reduce costs with the right mix of tools and automation.

Reduce costs with an integrated digital foundation and right-sized applications while saving on subscription costs and optimizing capacity and performance needs – both on-prem and in cloud.

3 Accelerate time-to-market and internal efficiency.

Whether you're bringing an app to market or building an internal system, access to high-quality data drives informed decisions that will boost your bottom line and dazzle customers.

"With DI Squared, we've met our goal of implementing an enterprise-wide information management system with mature data infrastructure... over 1,500 data tables, having trillions of data records, sourced from 10 major systems."

– Margo Herschberger, Aerojet Rocketdyne

Don't just dashboard. Dazzle your staff and boost your bottom line with secure, compliant, and well-governed platforms.

Our Practice Analytics

Analytics platforms are everywhere.

Analytics platforms that offer employees a great user experience that's engaging and easy to use... not so much.

DI Squared creates analytics applications that thrill your users while meeting enterprise-level requirements around governance, security, and compliance. Using advanced engineering practices and cloud-native technologies, our strategy enables teams to (happily) use intuitive tools while reducing vendor lock-in.

We help you choose (or build) the right platform for your business, users, and customers.

Our Services

- Data strategy
- Vendor selection
- App integration
- Master data management
- ETL pipelines
- BI implementation
- More

How We Help

1 Find

We help companies to move from legacy data analytics into modern, fully integrated self-service platforms.

Through our partner network, we find you products with the features, strengths, and price tag for your goals.

2 Use

We examine how tools are used across your organization, measure performance against benchmarks, and make recommendations for gaining value through upgrades, training, and more.

3 Extend

Go the extra mile with augmented and predictive analytics. We help you tap into advanced features in the toolsets you've already adopted, or find the right technologies to fill in your gaps.

"DI Squared & Qlik allowed us to rapidly address critical data reporting gaps and equip teams to drive improvements, and streamlined day-to-day & hour-to-hour operations."

– Sandra Grogg, Dorman Products

Whether predicting shopper behavior or forecasting supply chain shifts, cognitive computing solutions improve outcomes.

Our Practice

Predictive & Cognitive Computing Solutions

Data analytics is more than an enhanced reporting activity; it's a critical decision-making tool that's infused into every part of your business.

AI/ML and predictive analytics can vastly improve results and outcomes – when applied to the right use cases in a thoughtful and cost-conscious way.

DI Squared helps you perform at your peak with models that are carefully designed, monitored, and aligned with business goals – while balancing costs against the value of your use cases.

Our Services

- Use case discovery workshops
- Feature engineering & enrichment
- Data auditing & profiling
- Modeling & monitoring
- CI/CD pipelines for ML workflows
- More

How We Help

1 AI/ML strategy development

Identify high-impact use cases and create a tailored AI/ML roadmap aligned with business objectives.

2 Data readiness and preparation

Ensure your data is clean and structured to support scalable, high-performance AI/ML solutions.

3 Predictive modeling

Design and train custom models that turn historical data into actionable forecasts and insights, cost effectively.

4 Model deployment

Deploy models into production, ensuring they remain accurate and deliver ongoing value. We're with you all the way.

Discover your ideal use cases for
AI/ML today with DI Squared.

Let's talk tech 

Extend your team and capabilities with the right skillsets, and a trusted advisor to support where you need it most.

Our Practice Managed Services

Sometimes, all you need is a good partner to scrub in where needed.

Whether that's embedding into your teams and augmenting staff, post-migration optimization, or monitoring your platforms for efficiency, we're with you every step of the way.

DI Squared takes care of your environment to ensure your operations run smoothly. We assist you with everything from short-term projects to long-term managed services, in the format you prefer.

Our Services

- Strategic augmentation
- Platform management
- System administration
- Compliance and reporting
- BCDR management
- Platform enhancements
- More

How We Help

1 Cost effective model

We offer competitive rates for managing your systems, irrespective of your tech stack. Whether just a few systems or your entire enterprise-wide architecture, we cover your full tech landscape (with gusto and pride).

2 Significant technical expertise

Our teams hail from a wild number of industries, with expertise in hundreds of tools and techniques. We have the technical chops to work with your full stack.

3 24/7 monitoring and global teams

What can we say? We're people people. Even if systems go down during peak season or scheduled maintenance leads to outages, never fear! We're there from morning to morning.

"When technical expertise is paired with strong communication and responsiveness, it creates a partnership—not just a project."

— Alan Tam, Manager of Analytics, DI Squared

People *are* value. Our DataOps pros pin down your core competencies and help put a best-fit Agile practice into practice.

Our Practice Delivery Modernization

Even with the right technologies in place, rigid delivery methods or inflexible strategies can hurt efficiency.

With our delivery modernization service, we give you back time through accelerated data delivery and mature Agile processes.

Regardless of where you are on your data journey, we work with the resources you already have to build a balanced delivery methodology and to build the core competences needed to maintain it.

Our Services

- Agile maturity assessment
- Team Agile coaching
- PI planning & VSM facilitation
- Staff augmentation
- Business analysis
- More

How We Help

1 Assess

Optimize how you deliver through an in-depth Agile Methodology Assessment and custom Agile framework that best fits your org, industry, and culture.

2 Coach

Through team workshops, leadership coaching, and facilitation, we propel your teams to reach their performance potential by strengthening their core delivery skills.

3 Analyze

We ensure that updates to your data and analytics operations deliver tangible business and customer outcomes.

4 Augment

With our high-impact staff augmentation program, we provide in-house Agile leaders to optimize your processes – with lasting impact on your teams.
